Novel Therapies for Type 1 Diabetes: Islet Transplant & the TrialNet Experience

- Melena Bellin, MD

OBJECTIVES

At the completion of this program, participants will be able to:

1. Identify the key considerations in patient selection and training for insulin pump and/or glucose sensor therapy.
2. Discuss the management of insulin pump and glucose sensor patients in the primary care setting.
3. Describe the role of free radicals, antioxidants and the ratio of omega-6 to omega-3 fatty acids in the development of diabetes complications, including nutrients and phytochemicals important in this context.
4. Identify four micronutrients likely to be a problem in the diets of people with diabetes and simple interventions to correct this problem.
5. Define diabetic gastroparesis.
6. Describe the methods used to diagnose and treat gastroparesis.
7. Discuss the pathophysiology and diagnosis of erectile dysfunction.
8. Explain treatment options for erectile dysfunction.
9. Identify clinical trial opportunities available for people with type 1 diabetes.
10. State the role of islet transplant as a therapy in type 1 diabetes with hypoglycemia unawareness.
11. Describe immunosuppression trials aimed at slowing or stopping the progression of autoimmune (type 1) diabetes.

Avera McKennan offers all educational programs, materials and services to all people without regard to age, race, color, religion, sex, disability or national origin. If you require any of the auxiliary aids or services identified in the "Americans with Disabilities Act" (e.g. assistive listening devices or Braille materials), please call at 605-322-8950 or write Education Services at 800 E. 21st Street, PO Box 5045, Sioux Falls, SD 57117-5045.
